Calculus At the heart of calculus is the relationship between four concepts:8 •The instantaneous velocity of a particle is the rate of change of its displacement •The net displacement of a particle is the net area under its velocity-time graph To state such principles essentially requires the concept of a graph and thus some form of analytic

Calculus and Analytic Geometry Page 5 MODULE I CHAPTER 1: NATURAL LOGARITHMS The natural logarithm of a positive number x is the value of the integral $\int_1^x \frac{1}{t} dt$ It is written as $\ln x$ ie., $\ln x = \int_1^x \frac{1}{t} dt$, $0 < x < \infty$... (1) Remarks 1 If $x > 1$, then $\ln x$ is the area under the curve $y = \frac{1}{t}$ from $t = 1$ to $t = x$

ANALYTIC FUNCTIONAL CALCULUS 5 115 Analytic functional calculus (part I) It is possible (and desirable) to define more general functions of matrices, just like the already defined exponential of a matrix A. Definition is useful at this point: the maximal absolute value of the eigenvalues of A is called the spectral radius of A: Definition 6

Analytic Geometry Much of the mathematics in this chapter will be review for you. However, the examples will be oriented toward applications and so will take some thought. In the (x,y) coordinate system we normally write the x -axis horizontally, with positive numbers to the right of the origin, and the y -axis vertically, with positive numbers above.
